

Bio-Regen Bio-Cat Booster FOG

Product Overview

Bio-Regen Bio-Cat Booster FOG is specially formulated to enhance the natural biodegradation process of fats, oils, and greases in grease traps and wastewater systems by combining **Carboxx**, 3 Tier's proprietary Activated Humic Acid, with our scientifically blended **Bio-Cat Booster**, a diverse package of essential amino acids which stimulate and accelerate the molecular breakdown of grease & oil, complex sugars and other proteins.

Bio-Regen Bio-Cat Booster FOG doesn't simply emulsify the fats/oils/greases and push it down stream which can cause problems with the local municipal wastewater systems. Both the **Carboxx** and **Bio-Cat Booster** work synergistically to fractionalize the fats/oils/greases, ultimately converting those complex molecules into simpler more assimilable forms to be consumed more efficiently by the micro-organisms present in the grease trap.

Most competitors' products have fallen short in their claims of keeping traps free of heavy solids buildup by using outdated technologies that simply add microbes. These products require significant amounts of retention time in the traps just to grow and work efficiently. Furthermore these microbes are not acclimated to the difficult natural environment of the grease trap which often times exhibit lower than desirable pH conditions.

Bio-Regen Bio-Cat Booster FOG's nonbacterial formula doesn't require time to "grow" like many of the others. The **Carboxx** and **Bio-Cat Booster** are immediately active once added to a trap and operate efficiently in a pH range of 3 to 9. This formula stimulates the naturally occurring micro-organisms present that are already acclimated to that particular grease trap environment. In addition **Bio-Regen Bio-Cat Booster FOG** reduces obnoxious odors associated with grease trap operation. This formula keeps traps free flowing and working at peak efficiency which translates to fewer pump outs and reduced maintenance.

Application Information

For grease traps with up to 250 gallons Daily Flow: Add 4 to 6 ounces of **Bio-Regen Bio-Cat Booster FOG** directly into the trap daily. **Bio-Regen Bio-Cat Booster FOG** with a peristaltic pump throughout the day.

For grease traps with up to 500 gallons Daily Flow: Add 6 to 8 ounces of **Bio-Regen Bio-Cat Booster FOG** directly into the trap daily. For best results inject **Bio-Regen Bio-Cat Booster FOG** with a peristaltic pump throughout the day.

For wastewater systems FOG buildup: Contact an authorized 3 Tier Distributor or representative for system analysis and application recommendations.

This product should NOT be added when sanitizers are in use. Monitor grease buildup and if a solid grease cap should form increase the daily dosage to 10 ounces until the cap is reduced.
