

Product Information Guide

SpillSorb – Slick Free Absorbent

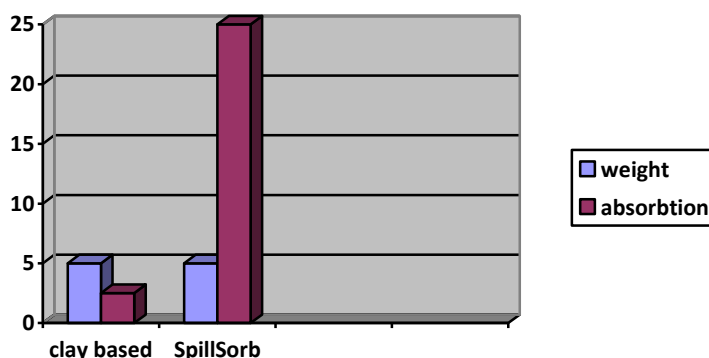

Ultimate Bio-Enzymatic Technology

Best Use: New Oil Spills/ Oil Slick Floors

Description

A fine grain, natural, silica-free, absorbent, inoculated with oil eating bacteria. SpillSorb is an ABSORBENT – it soaks up spills like a sponge- due to its crystalline, honeycomb structure, and is 6 times more effective than clay based products (clay is an ADSORBENT and relies on spills clinging to it). Surfaces treated with SpillSorb are free of oily residues and are slip free.

Features/Benefits

Safest: Petroleum based spills are extremely slippery, leading to inevitable falls and costly workman’s comp expenses. SpillSorb leaves treated surfaces slick-free, thereby reducing falls and related costs.

Concentrated: 6 x more effective than clay based products.

Re-usable: SpillSorb can be used until fully saturated. When it is fully saturated it will clump.

Non-leaching: SpillSorb will not leach absorbed contaminants. Over time, the oil-eating bacteria will break down petroleum into inert components. SpillSorb will suppress vapors on contact.

Uses

Ideal for oil, chemical, cutting oils, transfer fluids, coolants, solvents, paints, grease and other petroleum products.

Ideal in maintenance workshops, manufacturing plants, drill rigs, re-fueling areas, marinas, shipyards, repair facilities and more.

Preparation

SpillSorb is silica free. Some people with breathing sensitivities or allergies may prefer using breathing filters when using loose absorbents.

Application

Generously sprinkle SpillSorb, completely covering the spill. Agitate the area by sweeping SpillSorb back and forth until the spill is absorbed. Unused SpillSorb can be re-used until fully saturated. When SpillSorb is fully saturated, dispose of in compliance with local regulations.

Storage

Store containers in a dry area.

Clean Up

No special cleaning required.

Packaging Information					
Product	Description	Part Nos	packed/case	Cases/Pallet	Wgt/Case
